

# IMPACT BARREL

## PRODUCT FEATURES

1. The product is integrally molded by blow molding process.
2. Hollow design can absorb impact energy through deformation.
3. Modular accessories fit columns of all sizes.
4. Made of HDPE, withstands multiple impacts.

Height	1100mm
Corner Element	200mm
Intermediate Element	100mm / 200mm
Colour	Yellow
Material	HDPE
Place of use	Indoor Column
Impact Energy	1826Joule
2tons Forklite hit at	4.8km/h
Temperature Range	-30~50°C

## • Advantages

1. Crash-Tested
2. Quick Disassembly
3. Flexible Assembly
4. Convenient Maintenance
5. Choice of Length and width
6. Corrosion resistance
7. No maintenance
8. A tailored solution for every column
9. Modular combination
10. No painting required

## • Applications and typical environments

The plastic column protector provides comprehensive protection for rectangular columns against collision damage from forklifts, pallet trucks or lorries. The side parts of four independent elements can be fixed to each other with anchors, covering all inner diameters from 200×200 mm to 300×300 mm, including rectangular sizes (e.g. 200×300 mm). Additionally, the size can be expanded by adding elements, making it suitable for building columns up to 500×500 mm.

Logistics, supply chain and material handling industries	
Transport park logistics centers	Warehouses and storage facilities
Distribution centers	and more
